

Introducing...

VideoStik

VideoStik is the latest addition to the successful Ranger series of CCTV test equipment from NG Systems.

This low-cost, battery-operated, video-sensing device will detect the presence of standard 1v p to p video by simply probing the BNC terminated cable.

There are no switches or buttons - **VideoStik** is powered up only when a valid signal is applied.

VideoStik is housed in a sturdy aluminium tubular enclosure with a translucent nylon indicator tip that glows red whenever a video signal is detected.

SPECIFICATION

| | |
|------------------------------|-----------------------|
| Dimensions (L x Dia.) |180 x 20 mm |
| Weight (excluding batteries) | 50g |
| Power Source |2 x AA batteries |
